Performance and Reliability Analysis of Computer Systems: An Example-Based Approach Using the SHARPE Software Package provides a variety of probabilistic, discrete-state models used to assess the reliability and performance of computer and communication systems. The models included are combinatorial reliability models (reliability block diagrams, fault trees and reliability graphs), directed, acyclic task precedence graphs, Markov and semi-Markov models (including Markov reward models), product-form queueing networks and generalized stochastic Petri nets. A practical approach to system modeling is followed; all of the examples described are solved and analyzed using the SHARPE tool.

In structuring the book, the authors have been careful to provide the reader with a methodological approach to analytical modeling techniques. These techniques are not seen as alternatives but rather as an integral part of a single process of assessment which, by hierarchically combining results from different kinds of models, makes it possible to use state-space methods for those parts of a system that require them and non-state-space methods for the more well-behaved parts of the system.

The SHARPE (Symbolic Hierarchical Automated Reliability and Performance Evaluator) package is the 'toolchest' that allows the authors to specify stochastic models easily and solve them quickly, adopting model hierarchies and very efficient solution techniques. All the models described in the book are specified and solved using the SHARPE language; its syntax is described and the source code of almost all the examples discussed is provided.

Audience: Suitable for use in advanced level courses covering reliability and performance of computer and communications systems and by researchers and practicing engineers whose work involves modeling of system performance and reliability.

From reader reviews:

Leonard Dail:

Do you have favorite book? Should you have, what is your favorite's book? Guide is very important thing for us to know everything in the world. Each publication has different aim or goal; it means that book has different type. Some people feel enjoy to spend their time for you to read a book. They are really reading whatever they get because their hobby is reading a book. How about the person who don't like reading a book? Sometime, man feel need book after they found difficult problem as well as exercise. Well, probably you should have this Performance and Reliability Analysis of Computer Systems: An Example-Based Approach Using the SHARPE Software Package.

Mark Maney:

As people who live in the actual modest era should be upgrade about what going on or data even knowledge to make all of them keep up with the era and that is always change and advance. Some of you maybe will certainly update themselves by reading through books. It is a good choice for yourself but the problems coming to you actually is you don't know what one you should start with. This Performance and Reliability Analysis of Computer Systems: An Example-Based Approach Using the SHARPE Software Package is our recommendation to help you keep up with the world. Why, because book serves what you want and want in this era.

Nancy Figaro:

A lot of people always spent their particular free time to vacation or even go to the outside with them family members or their friend. Are you aware? If you want to try to find a new activity here is look different you can read the book. It is really fun for you personally. If you enjoy the book that you just read you can spent 24 hours a day to reading a e-book. The book Performance and Reliability Analysis of Computer Systems: An Example-Based Approach Using the SHARPE Software Package it doesn't matter what good to read. There are a lot of individuals who recommended this book. These were enjoying reading this book. When you did not have enough space to deliver this book you can buy typically the e-book. You can m0ore easily to read this book through your smart phone. The price is not to fund but this book possesses high quality.

People live in this new time of lifestyle always aim to and must have the time or they will get lot of stress from both everyday life and work. So , once we ask do people have extra time, we will say absolutely of course. People is human not a robot. Then we question again, what kind of activity have you got when the spare time coming to an individual of course your answer will probably unlimited right. Then do you try this

one, reading ebooks. It can be your alternative in spending your spare time, the book you have read is definitely Performance and Reliability Analysis of Computer Systems: An Example-Based Approach Using the SHARPE Software Package.
